TESTIMONY

LOEUL *et* PIRIOT

Loeul & Pirirot adopt AXEL CAMM to streamline their maintenance activities and manage them competitively

Loeul & Pirirot offers a wide range of cooked and raw rabbit-meat products, goat meat and many ready-prepared meals. Spread over six sites, this SME – based in the Deux-Sèvres area of western France – today has 800 employees and a turnover of 121 million euros. Loeul & Pirirot, the leader in its market, has diversified and brought together different teams around a common policy: transparency and respect for the consumer.

Upgrading to AXEL Net for greater optimization...

Since 1998, Loeul & Pirirot's Thouars site and the 21 people responsible for maintenance had been using AXEL CAMM Version 2, which had enabled them to change their maintenance activities and move towards **more preventive interventions and fewer curative measures**.

After three years, Émilie Agnoly, Assistant Technical Manager, wanted to **upgrade the AXEL CAMM solution – in particular, by using intranet** – and decided to install the Net version of AXEL CAMM, incorporating the **latest web communication technologies** and providing **simpler and faster access to the software package** for all

maintenance technicians and employees.

AXEL CAMM (Net) was therefore installed in order to:

- streamline spare-parts management,
- reduce breakdown repair times,
- free maintenance managers from responsibility for technical tasks,
- **coordinate** knowledge-sharing between production sites.

Installation / organization

IDimo Gestion rolled out AXEL CAMM (Net) in three weeks. The tree structure was closely examined; four years of machine intervention logs formed the initial database. This was added to over time by the technicians.

A "**maintenance co-ordinator**" was given the task of ensuring that users were familiar with the software and training the maintenance technicians.

Today, the organization in place is as follows :

- a "maintenance co-ordination" secretary manages spare-parts purchasing and checks that maintenance sheets are correctly entered,
- a "maintenance manager" bears overall responsibility for the project.

Technical features

- . Database: SQL Server 2000
- . Unlimited simultaneous access

. Associated modules:

Intervention request system via intranet: DI Web

Barcode system: Scan Palm

TESTIMONY

The benefits of AXEL CAMM

- **Time savings and more reliable data** as a result of **scanned inventories** as part of a progressive approach. This works perfectly since it can be carried out in just 1 day (3 scanners for 6 people) as opposed to the 15 days (for 4 people) it took previously.

- **Financial gains obtained by :**

- **"highlighting critical points"** in AXEL CAMM and solving them: a "progress plan" co-ordinator carries out surveys (data from AXEL CAMM reports), one of which has led to a reduction in the number of motorization replacements. Another survey brought to light the deterioration of control screens: seven in the space of one year (deterioration due to the positioning of screens near a machine).
- **validation of obsolete equipment** in AXEL CAMM and the possibility of **targeting replacements more effectively**.

- **stock optimisation** AXEL CAMM enables you to streamline stocks of spare parts (using minimum/maximum thresholds and alerts), thus **reducing "dead" stock**, and lets you quickly check availability in other factories.

- **efficient purchasing cost control** using analyses generated by AXEL : cost management charts, order total, changes in unit prices, etc. A set of pre-

cise supplier specifications has been drawn up by the Maintenance Department, which is in a position to negotiate and aware of purchasing performance.

- **Information sharing:** the technicians have easy access to intervention requests and can therefore retrieve the causes, effects and remedies for each incident recorded. This means that they **benefit from their colleagues experience**.

Expectations met, a constantly changing project...

"The reactivity of the whole Dimo Gestion team made for a quick and efficient installation. I like the Net approach a lot," concludes Émilie Agnoly. Dimo Gestion can carry out modifications from its Limonest site.

Regular meetings are organized in conjunction with the Dimo Gestion team in order to review the way the system is being used, find out what aspects Loeul & Piriote wish to develop and discuss priorities: the **AXEL project is constantly changing**. **Solutions for malfunctions** are currently being planned: AXEL CAMM centralizes first-level operating procedures (e.g. "start machine" or listings of problems encountered). All the maintenance technicians have access to these documents.
